Markup Assist: Intuitive cursor movement (video: 1:23 min.)

Symbol Editor in AutoCAD: The Symbol Editor now opens to the exact position where the current object is located, so you can make annotations without having to move to another workspace or using the RMB to switch to the object's currently active viewport. This allows for faster annotation since you no

longer need to move to and from the Symbol Editor. Symbol Manager: The updated Symbol Manager makes it easier to create symbols with new functionality to meet your specific design needs. For example, the new Markup Symbol Maker allows you to make and apply custom shapes with symbols. Layer Feature (freeform): Make features visible on the screen without needing to draw them. Simply

click to place the feature, and drag to rotate it. Click to remove the feature. This feature is also available on the Home tab. Creation of complex geometric features in AutoCAD is simplified by creating a starting point with the Freeform option. After this, it is easier to create features by dragging and rotating them in any direction. You can also change the attributes of a feature. For example, you can draw and

color the edges of a feature, or place a small image in it.

Design-Time Configuration: You can now configure new objects and tools in the Options dialog so that they are applied immediately when the dialog is opened, and saved so they will not be lost when you close the dialog. This saves you time because you no longer have to repeat the configuration steps every time you open a drawing.
